The potential for colonization of Mars

1108209036朴善熙 1108200159劉沛涵 1108224021蔡昀恩 1108203095何宜融

Motivation:

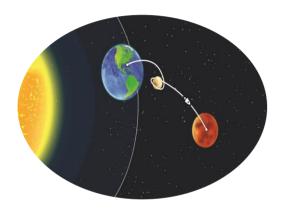

Over-developed

Global warming

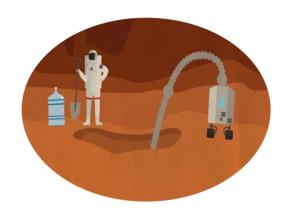

Running out the resources

MOVING TO MARS

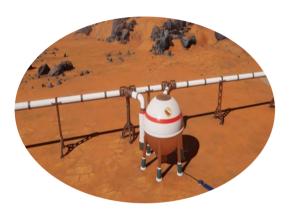

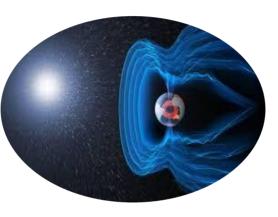

Distance

Time

Rich of resource

Constraint of fuel

Radiation

health problems

Alien creature

Environment

Solution:

Solid-state analogue to Earth's atmospheric greenhouse effect.

Silica aerogel

- Transmit sufficient visible light for photosynthesis
- Block hazardous ultraviolet radiation

• Raise temperatures underneath it permanently to above the melting point of water

Moving to the Mars is not an easy task, we need to protect our earth and not to get worsen.
